SOLID

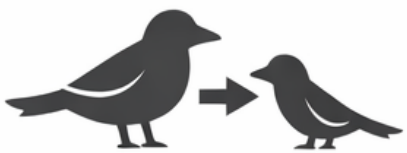
S Single Responsibility Principle

One job

O Open/Closed Principle

Open for Extension, Closed for Modification

L Liskov Substitution Principle

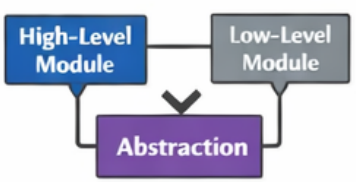


Replaceable Subtypes

I Interface Segregation Principle

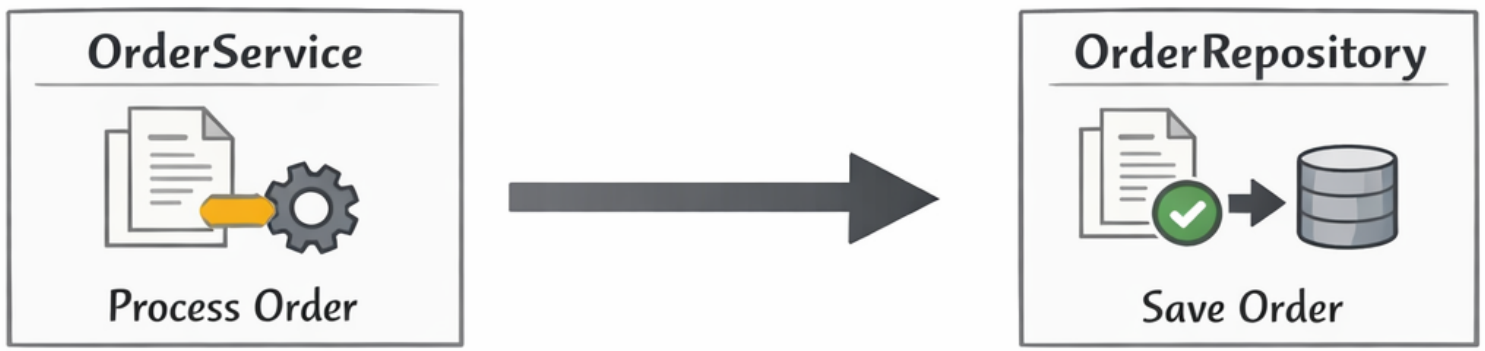
Small Interfaces Too Large

D Dependency Inversion Principle



Depend on Abstractions

Single Responsibility Principle (SRP)

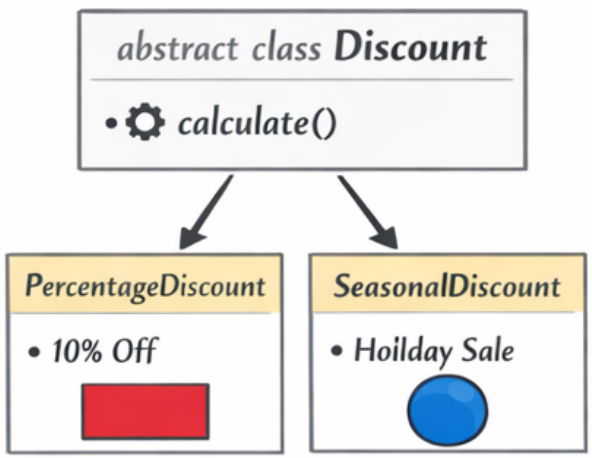


Each class has one job

Open/Closed Principle (OCP)

Open for extension, closed for modification

Interface Segregation Principle (ISP)



HumanWorker

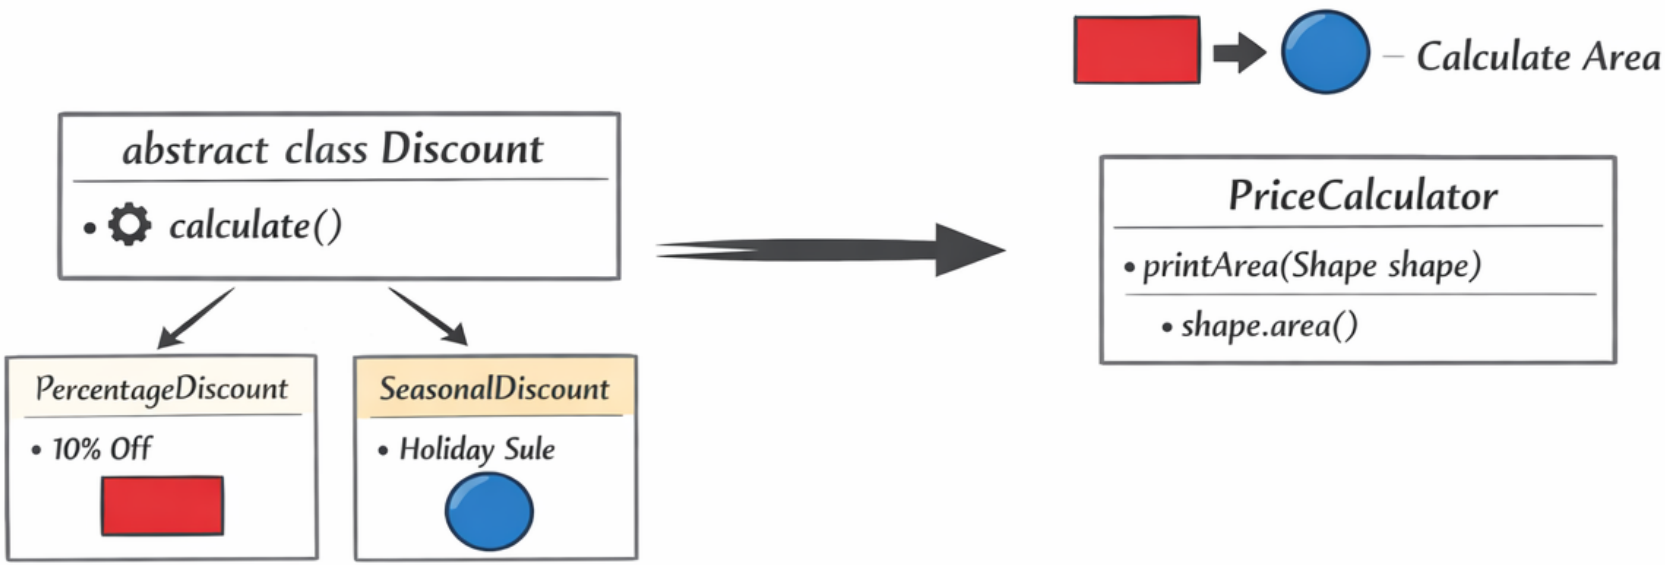
- work()
- eat()
- sleep()

RobotWorker

- work()

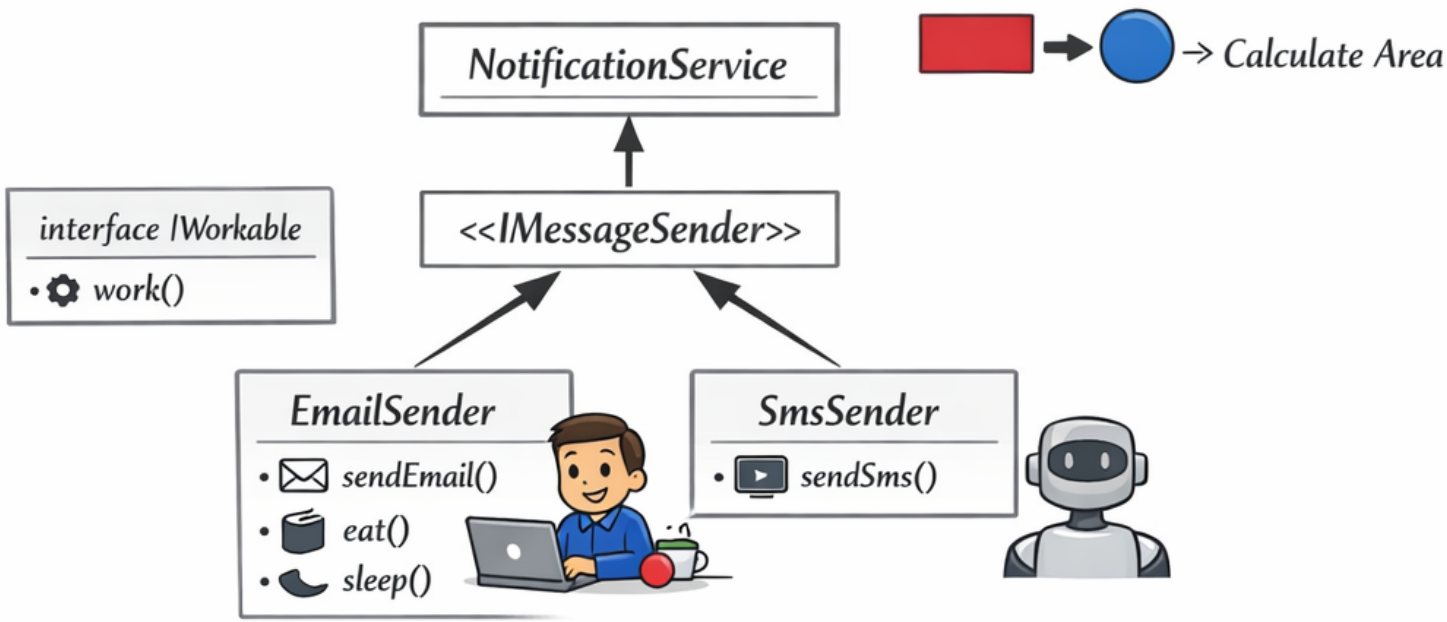
Clients shouldn't depend on unused methods

Liskov Substitution Principle (LSP)



Subtypes can replace base types

Dependency Inversion Principle (DIP)



Depend on abstractions, not concretions
